## IN THE CLAIMS:

Please amend claims 9, 14-16, 25, 30 and 31 to read as follows:

- 9. (Amended) An appliance maintenance apparatus for maintaining an appliance including a plurality of light outdoors emitting lights showing the operation states of said appliance, comprising:
  - light detecting means for detecting said lights emitted from said light indicators.

- 14. (Amended) An appliance maintenance apparatus as set forth in claim 1 or 9, in which said lights collectively form light information, and which further comprises light information indicating means for indicating said light information detected by said light detecting means.
- 15. (Amended) An appliance maintenance apparatus as set forth in claim 1 or 9, in which said lights collectively form light information, and which further comprises light information storage means for storing light information detected by said light detecting means.
- 16. (Amended) An appliance maintenance apparatus as set forth in claim 1 or 9, which further comprises a remote diagnosis control unit for remotely diagnosing said one or more appliances, a communication unit for communicating with said remote diagnosis control unit, and a communication cable operatively connected to said remote diagnosis control unit and said communication unit to ensure communication between said remote diagnosis control unit and said communication unit.

)

25. (Amended) An appliance remote maintenance system for maintaining an appliance from a remote location, said appliance including a plurality of light indicators emitting lights showing the operation states of said appliance, comprising:

an appliance maintenance apparatus including light detecting means for detecting said lights emitted from said light indicators, said lights collectively form light information, and information transmitting means for transmitting said light information detected by said light detecting means through a public network, and

a remote diagnosis control apparatus including information receiving means for receiving said information transmitted form said information transmitting means through said public network to ensure the remote diagnosis control of said appliance.

30. (Amended) An appliance remote maintenance system as set forth in claim 17 or 25, which further comprises light information indicating means for indicating light information detected by said light information detecting means of said appliance maintenance apparatus.

31. (Amended) An appliance remote maintenance system as set forth in claim 17 or 25, which further comprises light information storage means for storing light information detected by said light detecting means of said appliance maintenance apparatus.

## IN THE ABSTRACT:

A new copy of the abstract is enclosed herewith on a separate sheet.

## ABSTRACT OF THE DISCLOSURE

An appliance maintenance apparatus for contactlessly detecting the operation
states of appliances and operating the appliances in response to the operation states of the
appliances, and an appliance remote maintenance system which comprises a plurality of
appliance maintenance apparatuses, and a remote diagnosis control apparatus which is
communicatable with the appliance maintenance apparatus through a public network to
ensure the remote diagnosis control of the appliance maintenance apparatus from a
remote place.
